

## Briefing Note for the Member Forum February 2021

### Inactivation of Overdose and Poisoning Concepts Described as Undetermined Intent

#### Purpose

To update the Member Forum on the inactivation of concepts which refer to overdose or poisoning of undetermined intent.

#### Background

The Editorial Advisory Group (EAG) has recommended inactivation of concepts which refer to overdose or poisoning of undetermined intent because it is unclear what “undetermined intent” means (e.g. not asked, refused to answer, unable to answer).

#### Plan

Concepts which refer to overdose or poisoning of undetermined intent will be inactivated for the July 2021 International Release with a reason of Duplicate with a historical relationship to the unspecified parent.

This briefing note will be distributed to selected Advisory and Project Groups. Please contact [info@snomed.org](mailto:info@snomed.org) with any inquiries.
