

Briefing Note for the
 Drug Extension User Group (DEUSG), Content Manager Advisory Group
 (CMAG) and Clinical Leads Group
 4 July 2023

MRCM change: 1142142004 |Has pack size (attribute)| change from Integer to Decimal

Purpose

The purpose of this note is to inform the Drug Extension User Group (DEUSG), Content Manager Advisory Group (CMAG) and Clinical Leads Group of the upcoming MRCM change.

Issues

1142142004 |Has pack size (attribute)| is an attribute that is used for modeling real clinical drugs in a national extension (not for use in the international edition of SNOMED CT). The current MRCM prevents national extensions from using a decimal to define a pack size (for example, a 3.5 milliliter bottle) as it limits the attribute range to whole integers only.

Next Steps

The MRCM will be changed for Has pack size (attribute)| from Integer to Decimal.

Approvals	Date	Name
Chief Terminologist	July 5th, 2023	James T. Case
Director of Content and Mapping	July 4th, 2023	Monica Harry
