

A stethoscope is positioned diagonally across the right side of the slide, resting on a document. The document features a bar chart with several bars of varying heights and a pie chart with several slices. The background is a light, neutral color.

Using Snow Owl to Maintain Singapore's SNOMED CT Extension and Drug Dictionary

Linda Bird, Reymond Wilaisono (MOH Holdings)
Balazs Banfai (B2i)

26th October 2012
(10:45 – 11:30)

Agenda

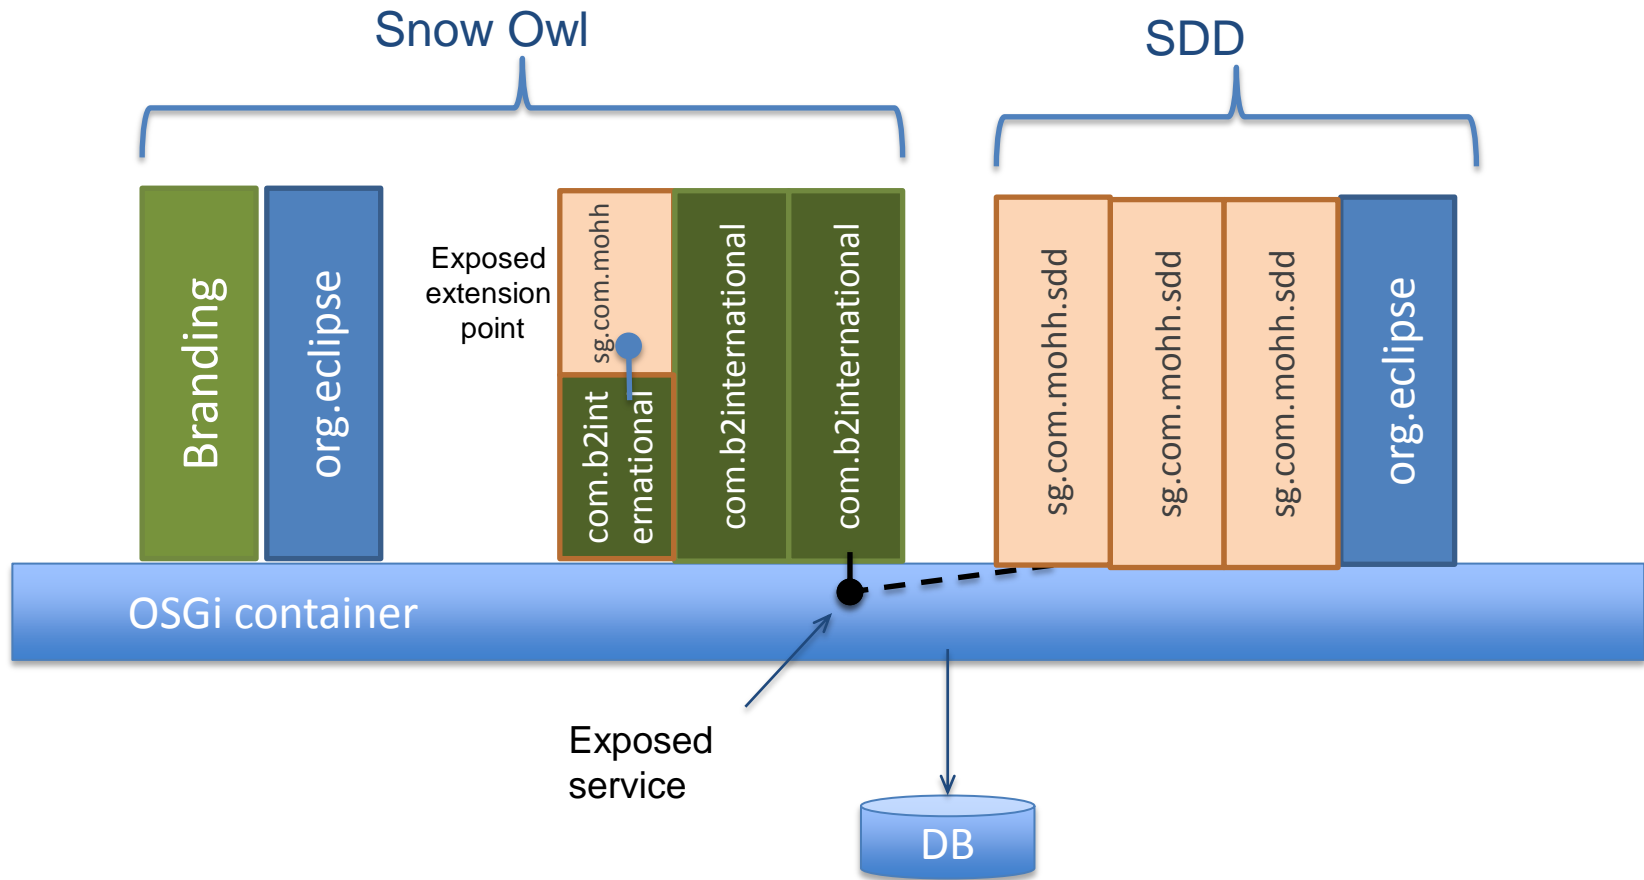

- Introduction to Snow Owl
- Singapore SNOMED CT Extension
 - Background
 - Snow Owl Demonstration
- Singapore Drug Dictionary
 - Background
 - SDD Tooling Demonstration
- Project Timelines

Snow Owl - Features

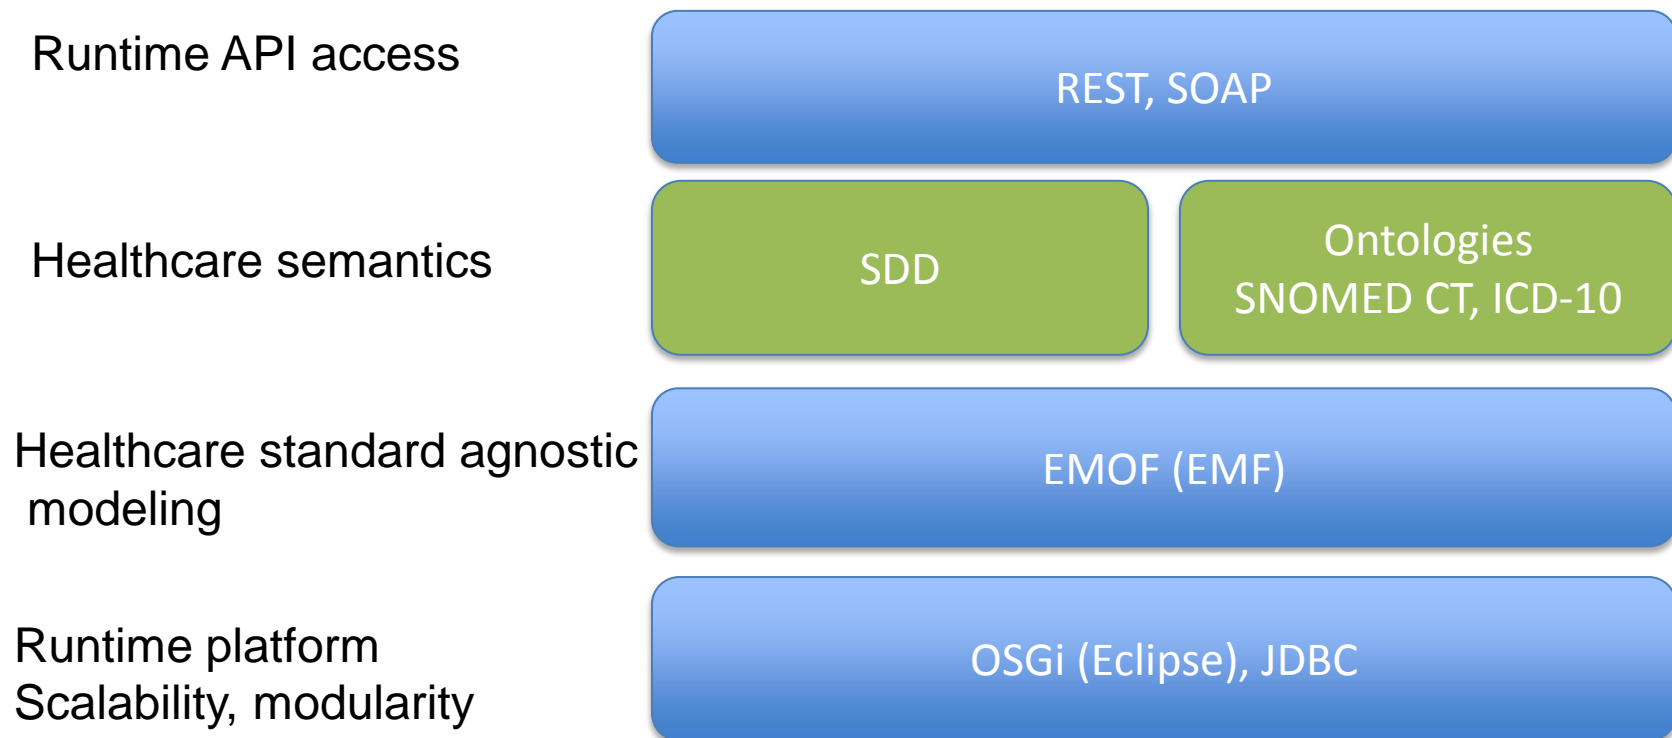

- Collaborative terminology authoring platform
 - Terminology
 - Subsets/Reference sets
 - Mapping
- DL classification
- Validation
- Semantic (ESCG/TermInfo) query support
- Concept model backed editing
 - MRCM support
- Task management support (workflow)
- Scripting support
- Terminology server
- Modular and extensible

- Built on the seasoned Eclipse tooling platform with wide industry adoption
 - Composed of bundles running within an OSGi (Eclipse) container
 - Bundles can be deployed depending the product definition (possible for both client and server side)
 - Help and branding information are in separate bundles
- SDD utilizes
 - the services provided by the Snow Owl terminology platform
 - quick search widget UI component
 - Snow Owl's classification module for semantic equivalence checking

Modularity & extensibility

Platform Standards Stack

Snow Owl Project Timeline

- V0: 2010 April - project kick-off
- V2.0: 2012 September 28 – current release
- V3: mid 2013
 - The de-facto integrated tooling platform for BOTH terminology and information modelling authoring
 - Runtime platform for meaningful query

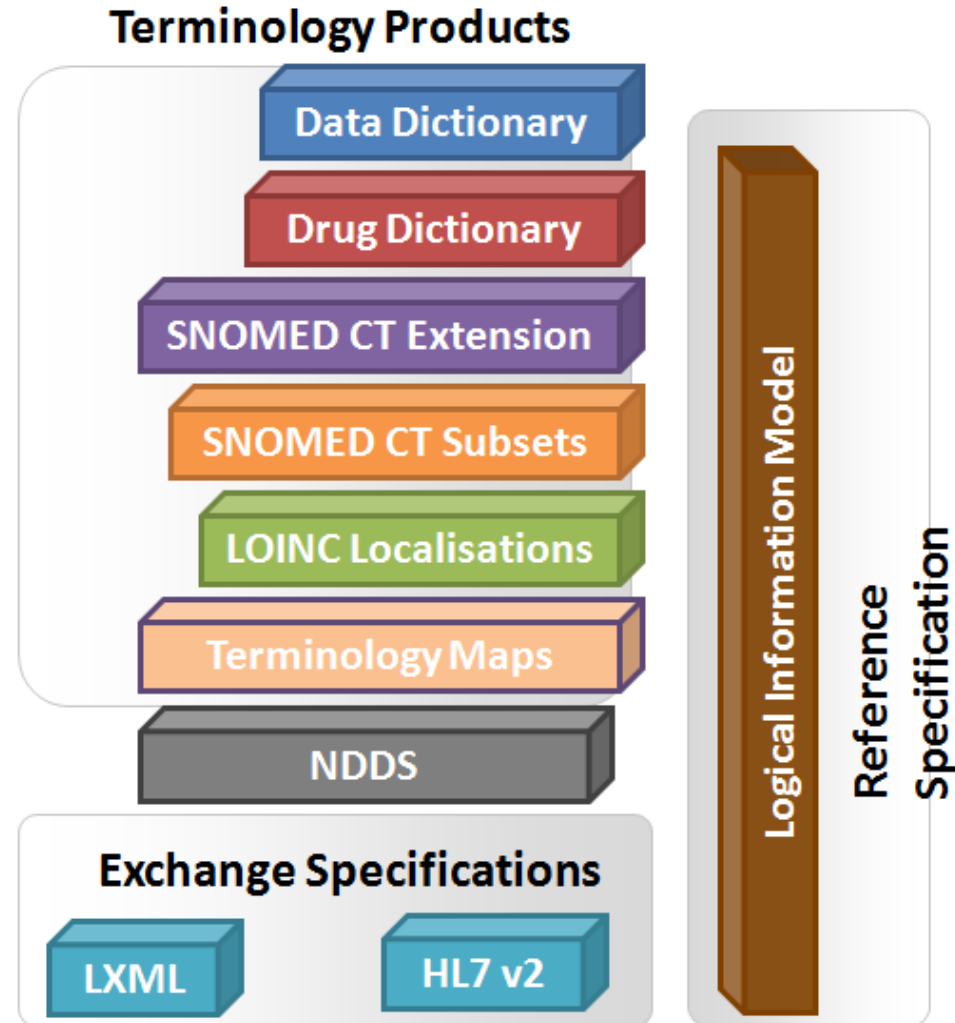

The image features a black and white photograph of an ECG tracing on a grid. A silver stethoscope is positioned over the top and bottom left of the tracing. A purple rectangular box is overlaid on the right side of the image, containing the text 'Singapore Terminology Development'. The ECG tracing shows various waveforms with labels such as 'U4', 'PGDN', 'PGUP U4', 'ALI-PGDN 1265', 'F3', 'F6', 'F7', and 'A + - +'.

Singapore Terminology Development

MOH Holdings Standards Products

- **Diagnosis** - SNOMED CT*
- **Drugs** - Singapore Drug Dictionary (SDD)
- **Allergic Reactions** - SNOMED CT*
- **Allergens** - SNOMED CT* + SDD
- **Laboratory Results** - LOINC (TBD)
- **Data Dictionary** - MOHH Data Dictionary
- **Procedures** - TBD
- **Reason for visit** - SNOMED CT*
- **Symptoms and Problems** - SNOMED CT*
- **Laboratory Reports** - Smart SNOMED CT*
- **Laboratory Orders** - SNOMED CT*
- **Radiology Orders** - SNOMED CT*

SNOMED CT* includes Singapore Extension

Snow Owl Demonstration

- Browse reference sets
- Add new concepts, relationships and descriptions
- Revision history
- Publication process

The background of the image is a grayscale photograph of a medical setting. It features an ECG (heart rate) monitor with a grid of small dots and several lead waveforms. A silver stethoscope is positioned over the monitor, with its chest piece in the lower-left corner and its earpieces extending towards the top-right. A single white, round pill is placed on the right side of the monitor. The overall composition is clean and professional, emphasizing medical care and health.

Singapore
Drug
Dictionary

Singapore Drug Dictionary (SDD)

A national standard to unambiguously identify, code, describe & interpret medicines.

Needs to meet the diverse requirements of different users and cater for new innovative products.

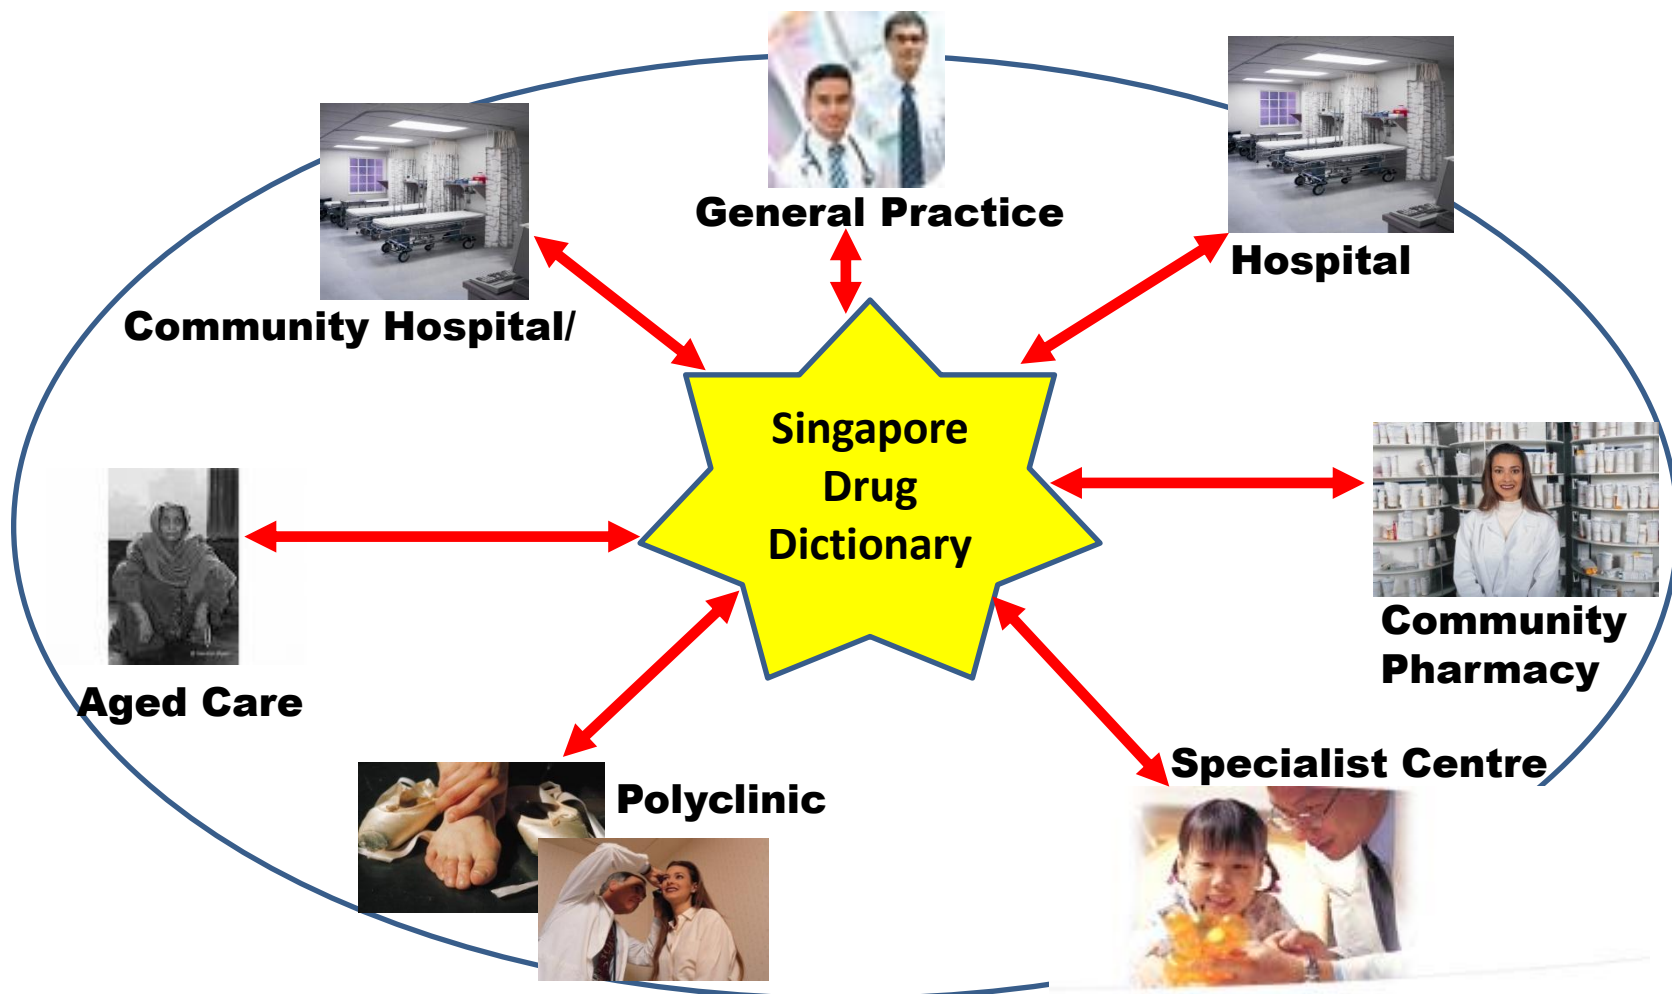

SDD Objectives

Improvements in clinical care activities, patient management and safety

- Semantic interoperability across use cases
- Semantic interoperability across care settings
- National / international decision support rules
- Medication safety initiatives including:
 - ✓ Medication management
 - ✓ Adverse drug event surveillance.
- Data mining, analysis and research

Interoperability Across Care Settings

Interoperability Across Use Cases

Registration

Inventory Management

Supply Chain

Prescribing

Dispensing

Administration

Medication Lists / Allergies / Research / Decision Support etc

SDD Principles

The SDD model has been developed with the following principles in mind:

- **Extensibility**
In both the drug content and data model to allow for innovations in pharmaceutical and device technology over time.
- **Ontology**
Based on ontological principles to support Singapore's growing need for Biomedical research.
- **Patient Safety, Semantic Interoperability and Decision Support**
These must be facilitated by the SDD and be the focus of clinician review and initial EMR vendor uptake.
- **Hide Complexity**
Complexity to be hidden from clinicians and most Electronic Medical Record (EMR) vendors.
- **Informed by Existing Clinical Practice**
Models tested against several thousand existing medication terms from hospital and GP prescribing/dispensing systems, PRIOR to finalisation of model.

Core Medication Classes

Brand

Ingredient

- Create Simple Drug Definition
 - e.g. PANADOL [Paracetamol] 500 mg Tablet
 - 3 x 10 tablets per blister strip
 - 1 x 30 tablets per bottle
- Generate Drug Ontology
 - View hierarchy and open concepts to see relationships created
- Multi-ingredient, Multi-component, Multi-subpack Drugs
 - Browse the drug definitions for these and resulting hierarchies

SDD Project Timeline

- 2012 February– SDD Project kick-off
- **V0.7: 2012 November 3 – current release**
 - Existing MOHH extension concepts and refsets imported
 - Source drug editor with revisions
 - Drug ontology generation for core medication classes
 - Drug description generation for core medication classes
 - Task management
- V1.3: 2013 June 3 - Final release
 - Drug ontology generation completed
 - Description generation completed
 - Drug ontology visualization
