

SNOMED
International

Expo 2018 Tutorial

Introduction to SNOMED CT

Jon Zammit and Anne Randorff Højen
SNOMED International

• INFEKTIÖS LUNGSJUKDOM

14669001

• ACUTE RENAL FAILURE

• SÍNDROME DE INSUFICIENCIA RENAL AGUDA

• NYRESVIGTSYNDROM

Overview

- Part 1
 - Background
 - Benefits
 - Meaningful records
 - Clinical knowledge linkage
- Part 2
 - Features
 - Customizing SNOMED CT
 - Analytics
 - Learn more

Background

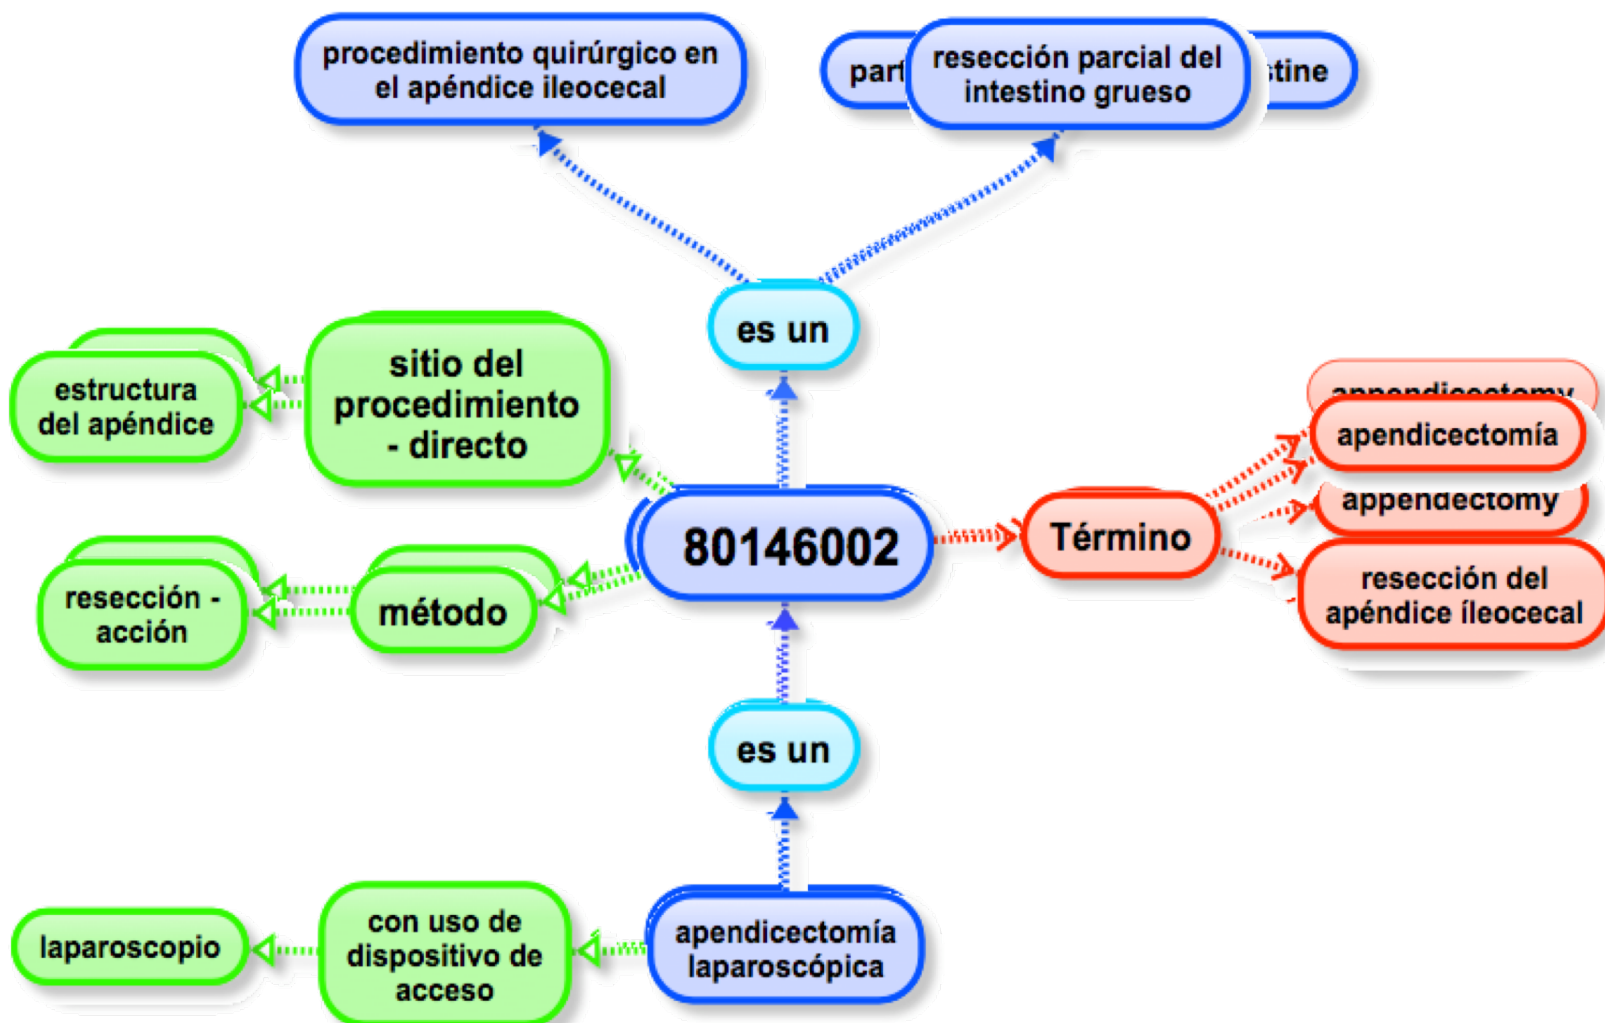

SNOMED Clinical Terms

- Most comprehensive multilingual clinical terminology
- Supports high quality clinical content in health records
- Increasing number of tools and implementations around the world

SNOMED CT - Not Just a Code System

SNOMED International

- An international not-for-profit organisation
 - Owned by Members
 - Governed by General Assembly of its Members
 - Funded by members based on national wealth
- Maintains and delivers SNOMED CT
 - Free use in Member territories
 - Low cost licenses for institutions in other countries

SNOMED International Membership Benefits

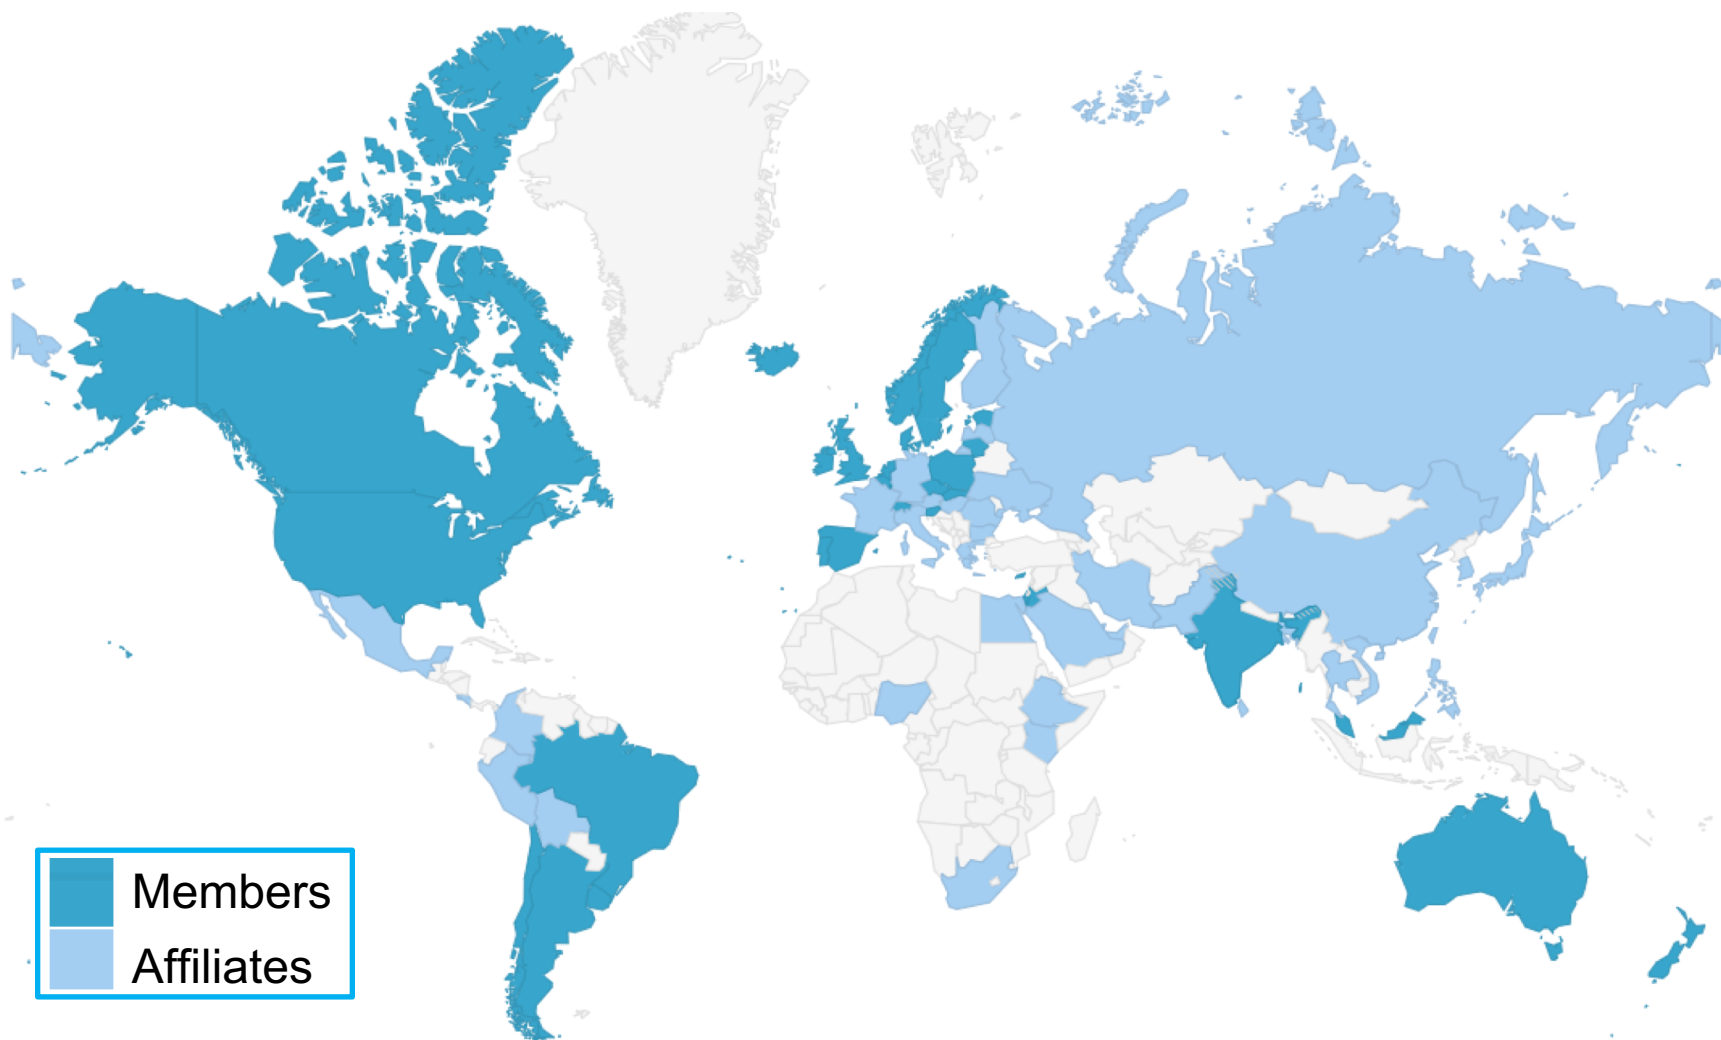

- Free use of SNOMED CT and related products
- Membership of General Assembly
- Ability to create national extension and translation
 - Financial support provided for translation
 - Ability to request additions to international release
- Access to global community of member countries
 - Forums and networks to learn from and share experiences
- Free new member induction
- Free education and courses
- Free open source tooling

SNOMED International Current Members

 Argentina	 Denmark	 Luxembourg	 Slovak Republic
 Australia	 Estonia	 Malaysia	 Slovenia
 Belgium	 Hong Kong	 Malta	 Spain
 Brazil	 Iceland	 The Netherlands	 Sweden
 Brunei	 India	 New Zealand	 Switzerland
 Canada	 Ireland	 Norway	 United Kingdom
 Chile	 Israel	 Poland	 USA
 Cyprus	 Jordan	 Portugal	 Uruguay
 Czech Republic	 Lithuania	 Singapore	

SNOMED Members and Licensees

Our Vision

By 2020 clinical terminologies will be used globally, which will result in better health, supported by one language of health.

Benefits

Making Clinical
Information
Meaningful

Electronic Health Records

- Making health records electronic
 - Improves communication
 - Increases availability of relevant information

... but this is only a partial solution; the real challenge is ...

- Making health records meaningful
 - Identifying significant facts in oceans of data
 - Linking the EHR to authoritative clinical knowledge

- **SNOMED CT represents clinical meaning and contributes to meaningful health records**

Different Health Record Perspectives

Process View of Records

- A chronological log of events and actions carried out as part of care delivery
- Provides information about
 - Who did what, when, where and to whom
- Valuable for
 - Resource management
 - Billing
 - Statistical reporting
 - Audit of processes

Meaningful View of Records

- A record that can be processed to present a meaningful view of the current clinical situation
- Provides information about
 - The immediate problems and risks for a patient
 - Outcomes of different types of clinical treatment
- Valuable for
 - Supporting care decisions
 - Enabling research and trials

An effective EHR needs to provide both views

Meaningful Views of a Game of Chess

Meaningful view of current situation

To start with white moved the queen's pawn to forward two spaces. Black responded by moving a knight in front of the king's bishop's pawn. White advanced the queen's bishop's pawn two spaces. Black then moved the king's-knight's pawn two spaces.

...

[47 more moves in same style]

...

Then black moved his king next to his rook.

What should white do next?

To decide I need to understand the current situation

Meaningful Views of the Current Situation

- Decisions require understanding of the current situation rather than detailed data about every event
 - The significance of past events varies, some are irrelevant others are critically important
- Computing the current situation depends on consistent processable representation of clinical information
- A meaningful record system should be able to make inferences and present a useful view of the current situation as a basis for decision making

SNOMED CT

- Is designed to support meaning-based processing of clinical information in health records
- The design adopts the peer acclaimed desiderata for clinical vocabularies documented in a paper by Dr James Cimino in 1998

A Purpose Built Terminology

- The requirements for effective representation of clinical ideas are described in Dr James Cimino's widely referenced, peer acclaimed 1998 paper
- "Desiderata for controlled clinical vocabularies in the twenty-first century"

**SNOMED CT
was designed to
address these
requirements**

- 1 Content, Content, and Content
- 2 Concept Orientation
- 3 Concept Permanence
- 4 Non-semantic Concept Identifier
- 5 Polyhierarchy
- 6 Formal Definitions
- 7 Reject "Not Elsewhere Classified"
- 8 Multiple Granularities
- 9 Multiple Consistent Views
- 10 Representing Context
- 11 Evolve Gracefully
- 12 Recognize Redundancy

Benefits

Clinical
Knowledge
Linkage

Knowledge Linkage Progress

- In recent years there has been rapid growth of knowledge linkage in many domains
 - For example, geographic knowledge linkage now allows us to access information about any point on earth
- Healthcare knowledge linkage remains patchy, system-specific and typically localized
- A standard open way to link health records to relevant clinical knowledge should be possible
 - What is needed to make this happen?

Geographic Knowledge Linkage

- A ZIP code gives you access to a wealth of knowledge about an area
 - A map, a satellite view, crime statistics, photographs, local restaurants

A Original U.S. Restaurant

515 Columbus Ave, San Francisco, United States
+1 415-397-5200

4.0 ★★★★★ 22 reviews - \$
spaghetti and meatballs - ossobuco
italian food - caprese salad - and

B Alioto's Restaurant

8 Fishermans Wharf, San Francisco, United States
+1 415-673-0183 - aliotos.com

3.8 ★★★★★ 839 reviews - \$
dungeness crab - touristy - southern
beautiful view
Best Restaurants Near SF's Fisherman's Wharf
Zagat

C Mona Lisa Restaurant

353 Columbus Ave, San Francisco, United States
+1 415-989-4917 - monalisasf.com

4.1 ★★★★★ 60 reviews - \$\$
roasted garlic - authentic italian food - waiter - favorite
place - white wine sauce

D North Beach Restaurant

1512 Stockton St, San Francisco, CA, United States
+1 415-392-1700 - northbeachrestaurant.com

4.1 ★★★★★ 564 reviews - \$\$\$
waiters - valet parking - prosciutto - wine cellar -
northern italian

E Tarantino's Restaurant

206 Jefferson St, San Francisco, CA, United States
+1 415-775-5600 - tarantinosrestaurant.com

Interoperable Geographic Knowledge Linkage

- ZIP codes
 - Groups of locations for one initial use case - postal services
 - Used for other purposes for which no specific areas are defined
- Limitations of ZIP codes
 - Areas vary in size and shape
 - Not precise enough for detailed journey planning
 - Not international
- Latitude and Longitude
 - The common denominator for interoperable geographic knowledge linkage
 - A global, logically defined, consistent set of coordinates for all surface locations on earth
 - Capable of being used to any level of precision
 - Used to define ZIP code areas to allow knowledge to be linked

Clinical Knowledge Linkage

- Clinical knowledge linkage needs a common coordinate system
- A way to pinpoint and interrelate health care concepts
 - International, non-commercial with potential for global adoption
 - Broad scope - not focused on a single discipline or specialty
 - Accurate and detailed representation of clinical information
 - Designed to represent meaning rather than terms or categories

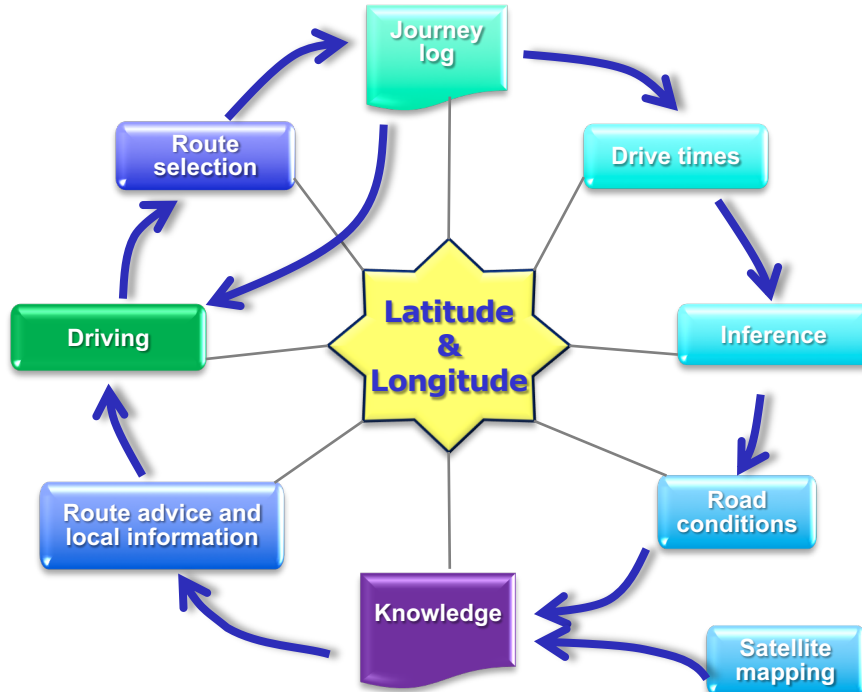

Clinical information is complex and requires a coordinate system that captures this complexity

Clinical Knowledge Linkage

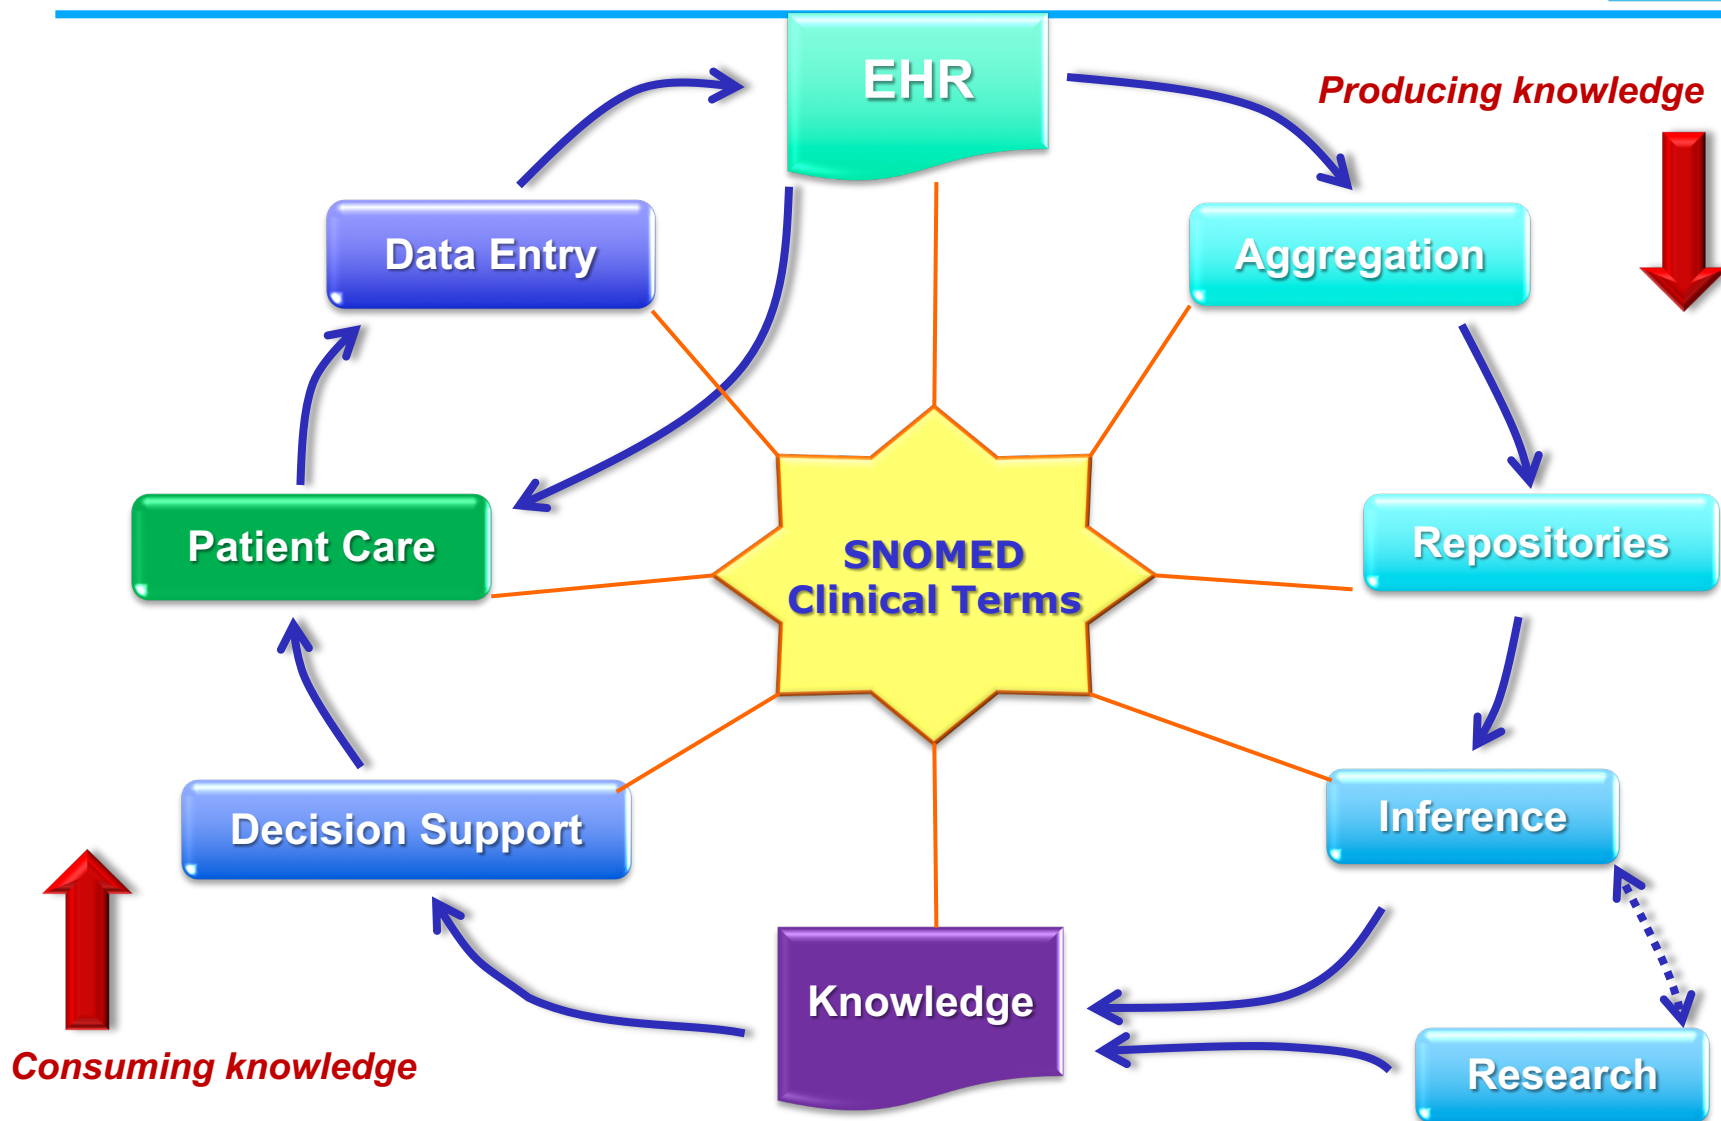

- SNOMED CT meets the requirements for an interoperable coordinate systems for EHR knowledge linkage
- SNOMED CT is designed to represent clinical meanings
 - **International** and owned by a not-for-profit association
 - Covers the broad **scope of healthcare**
 - Represents clinical information at **different levels of detail**
 - A **network of semantic links** between concepts
 - Enables description logic **inferences**
- Note
 - Classifications like ICD-10 are similar to Zip codes in that they specify arbitrary categories for a specific purpose (e.g. for statistical analysis)

Geographic Knowledge Cycle

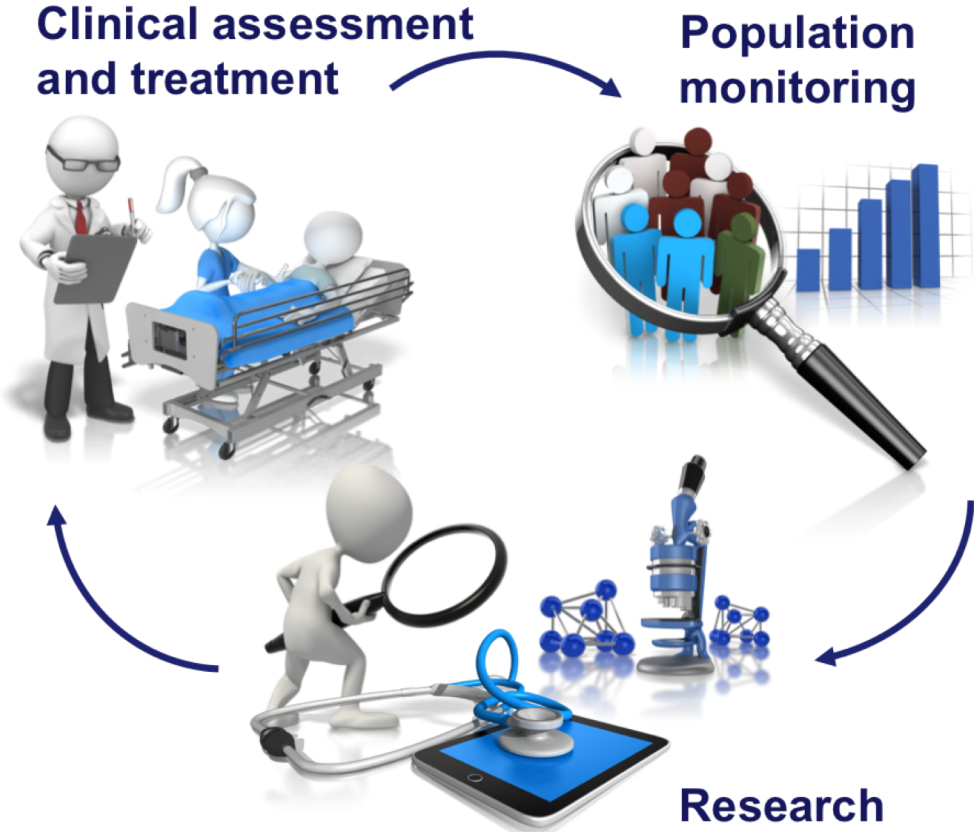

- Knowledge linkage is not a one way street – there is a cycle of knowledge
- Linked knowledge identifies roads, traffic conditions and toll charges to support routing decisions
- The journey itself contributes to linked knowledge about traffic conditions and drive times

Clinical Knowledge Cycle

Summary of Benefits

Benefits of SNOMED CT Implementations

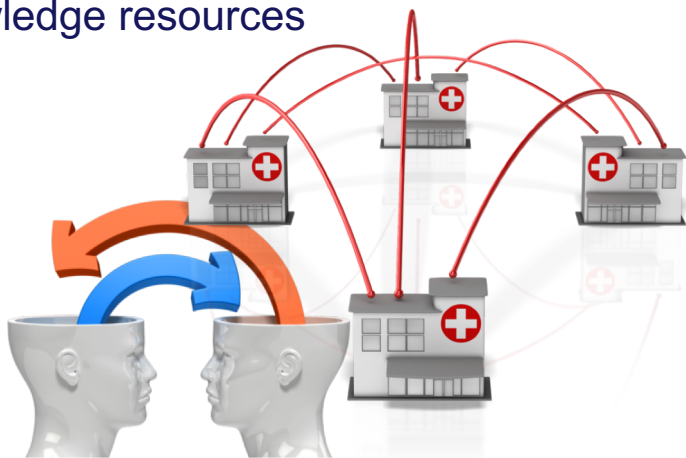

A solid foundation for clinical records

Improved access to guidelines and decision support

Interoperable information and knowledge resources

Improved Clinical and Business Intelligence

SNOMED CT Features

Concept

A clinical idea with a unique
identifier

22298006

Description

SNOMED
International

FSN myocardial infarction (disorder) 751689013

SYN myocardial infarction 37436014

SYN cardiac infarction 37442013

SYN heart attack 37333015

SYN MI – Myocardial infarction 17848

SYN myocardial infarct 17848

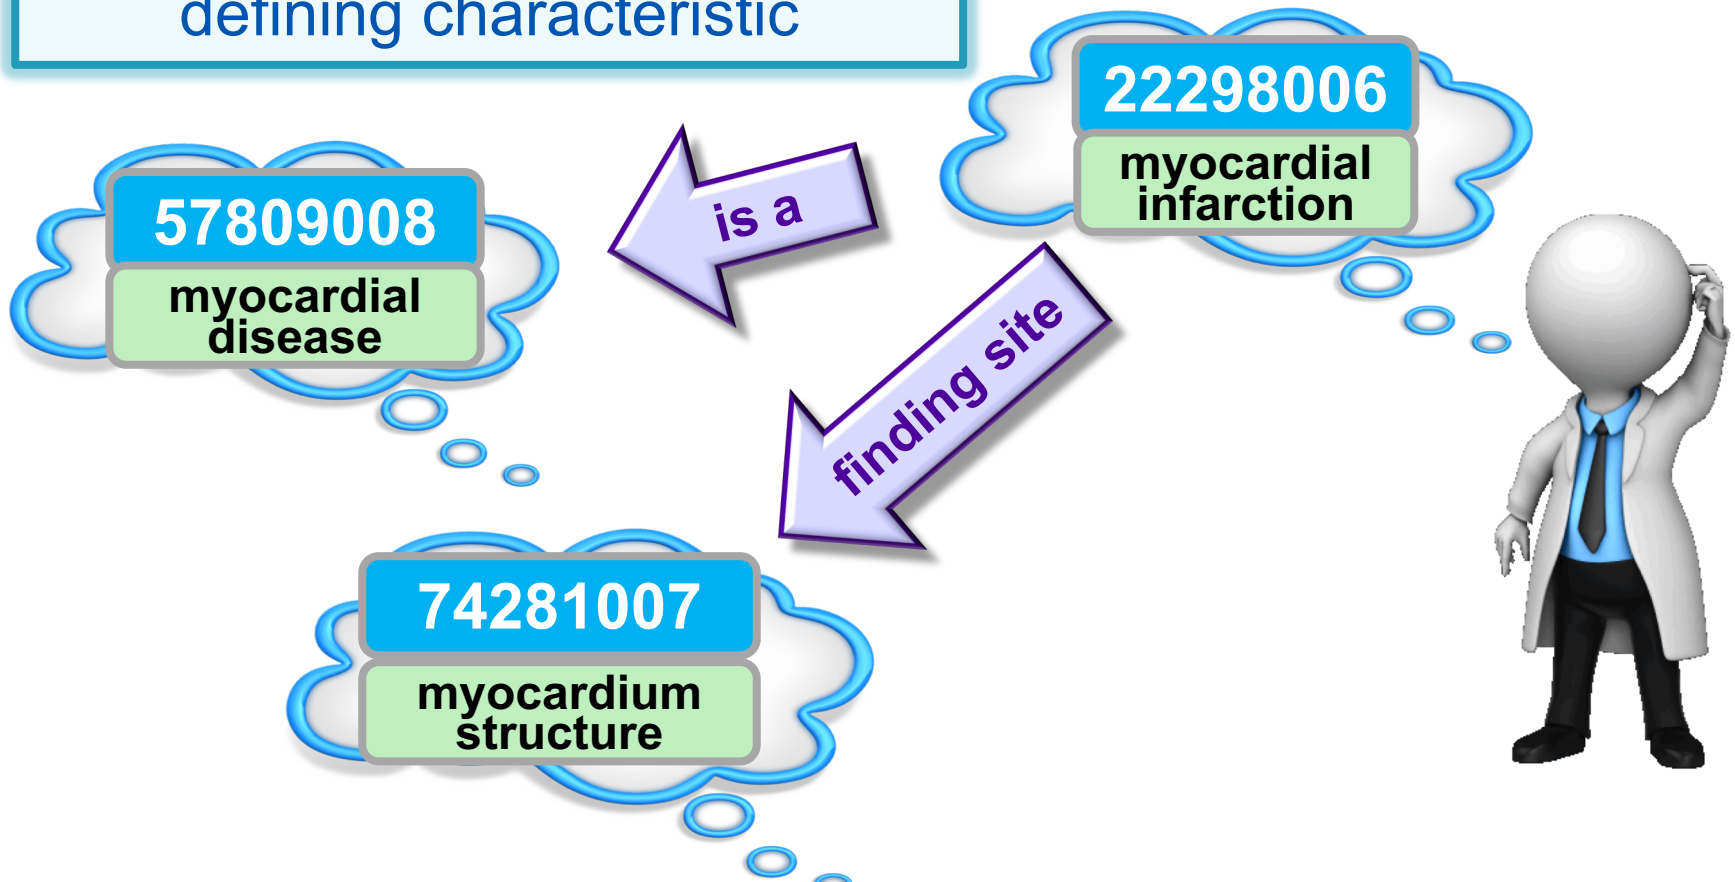

22298006

Human-readable term
linked to a concept

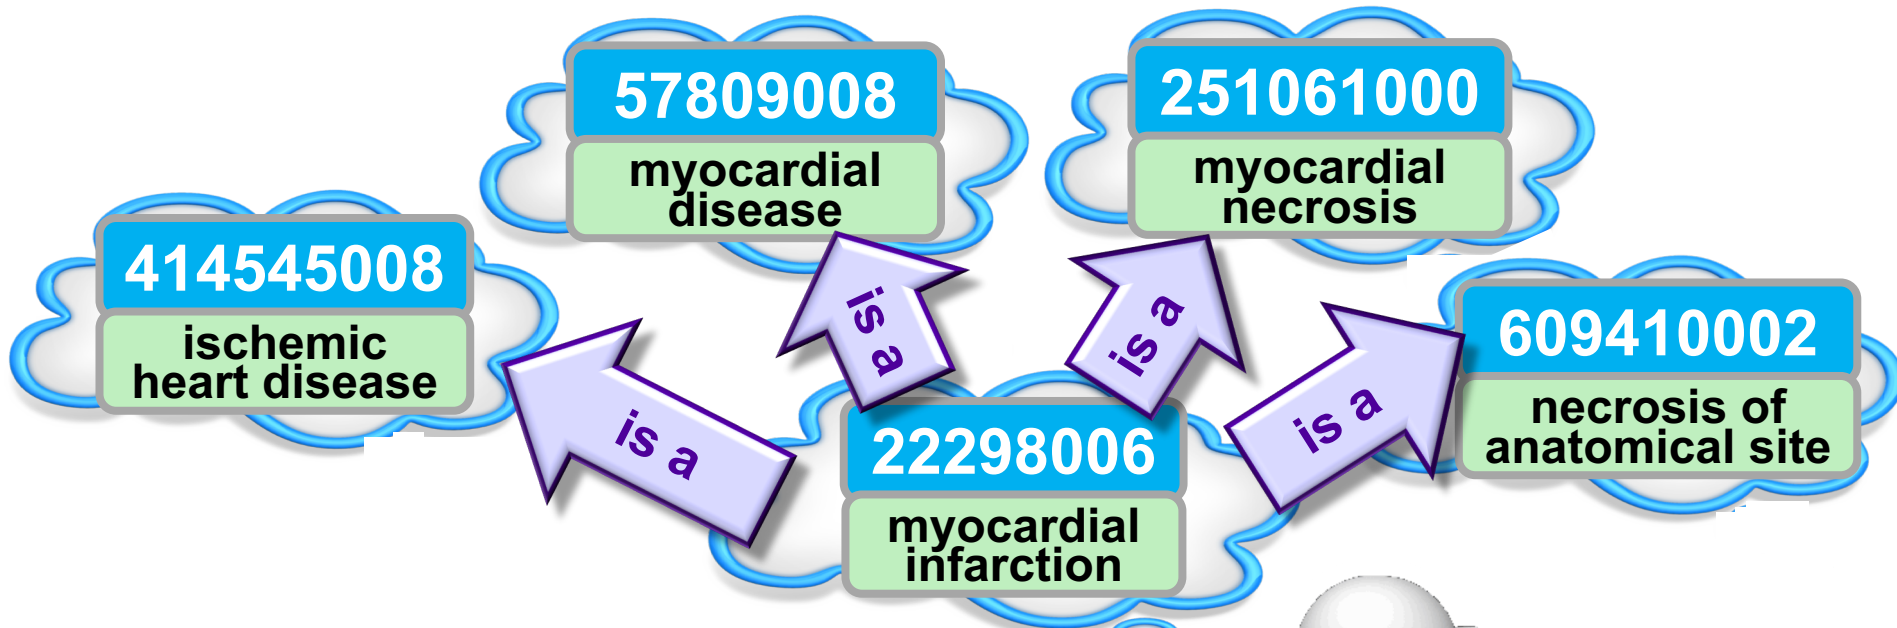

Relationship

Association between two concepts to represent a defining characteristic

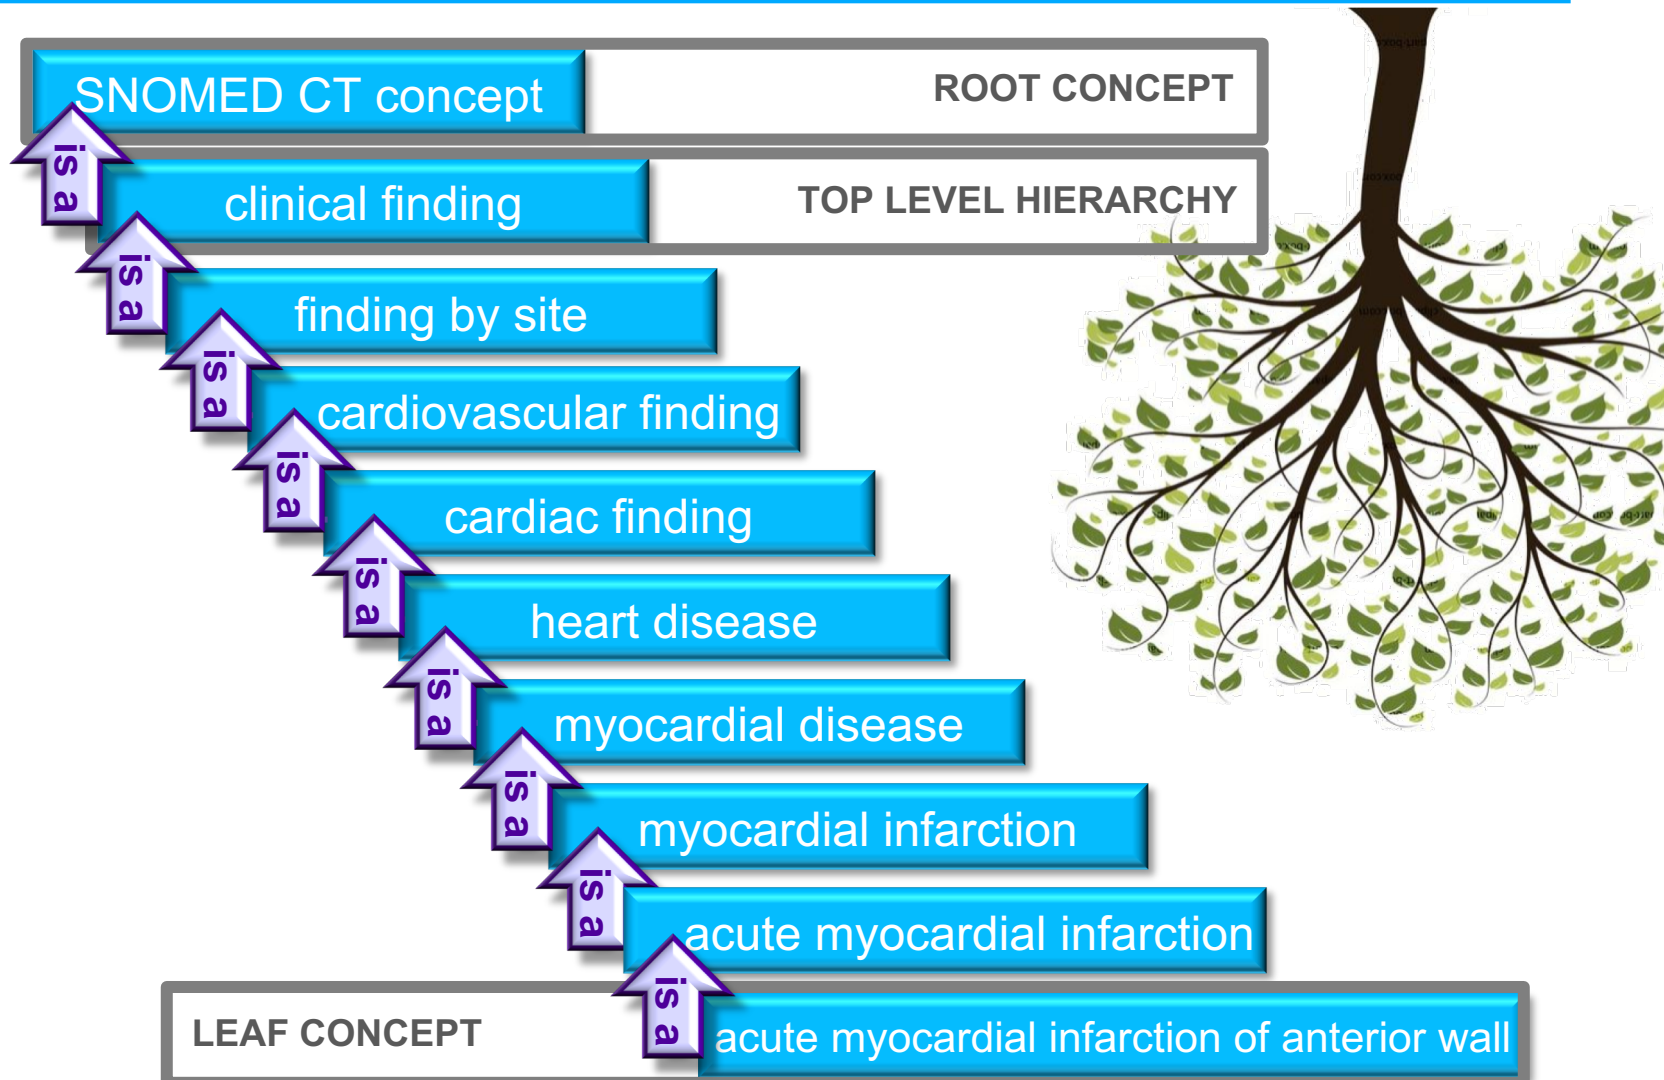

Relationship

'is a' relationships form a subtype 'polyhierarchy'

Subtype Relationships

Subtype Relationships

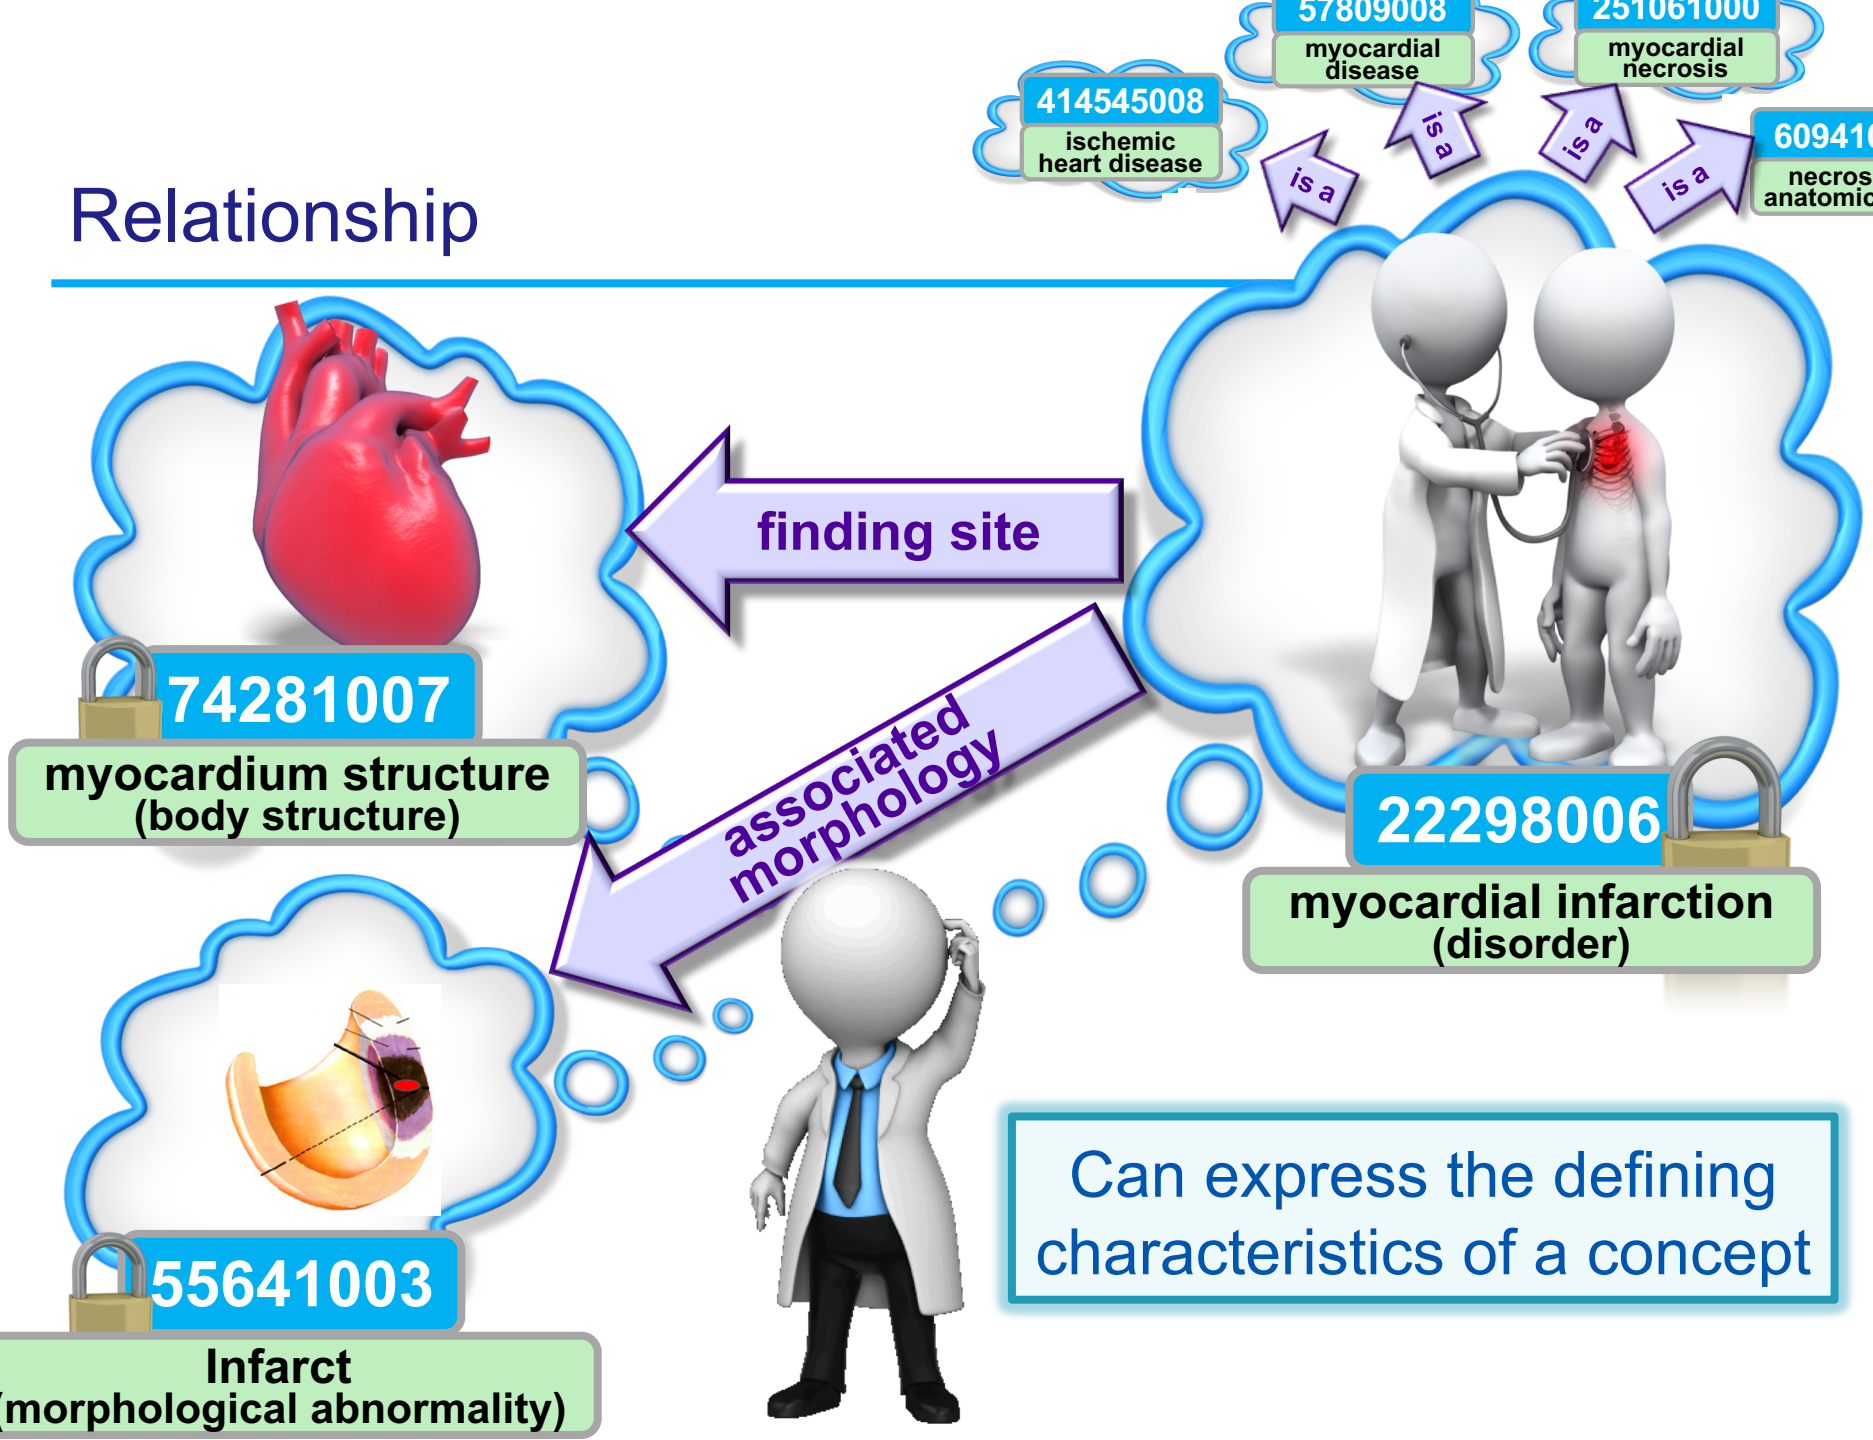

SNOMED CT Content Hierarchies

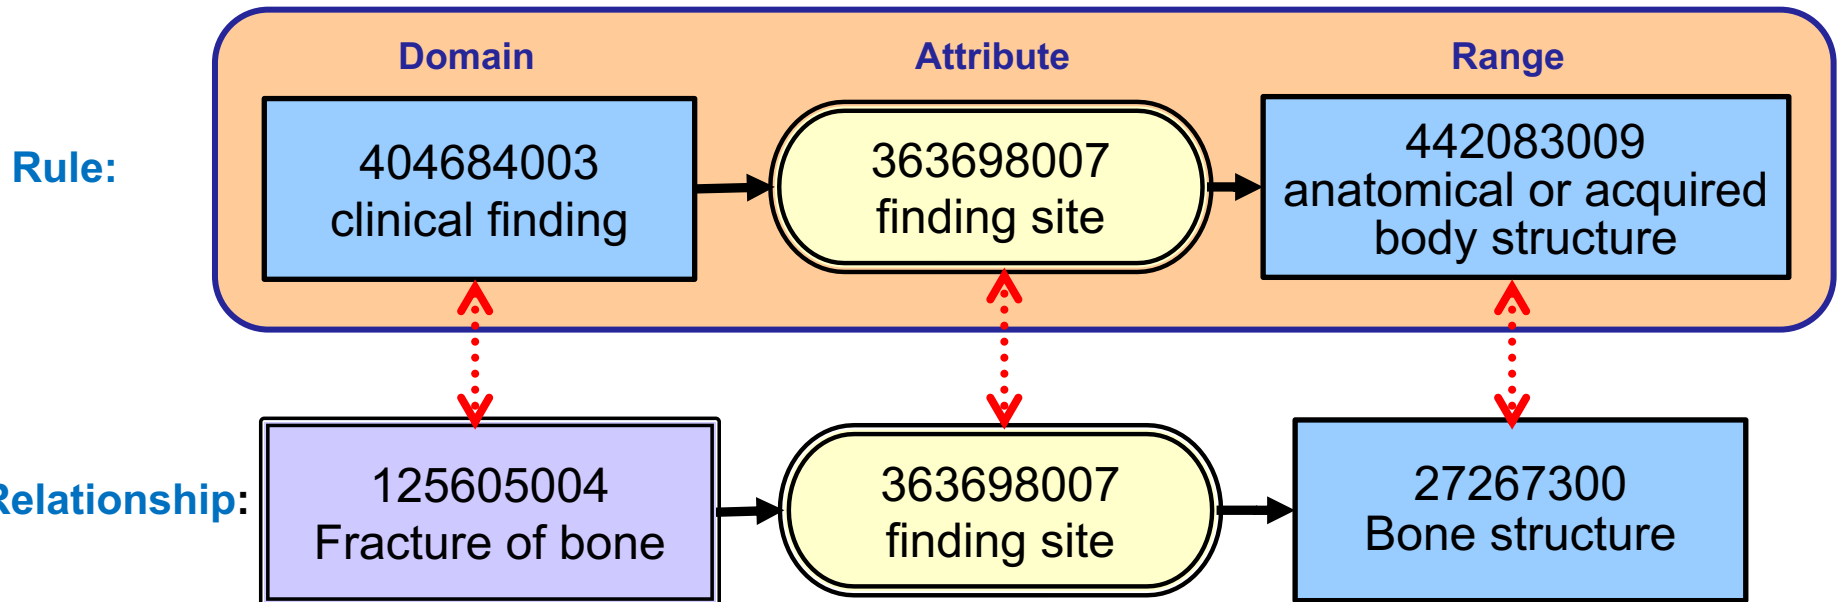

- ▼ ● SNOMED CT Concept
 - ● Body structure (body structure)
 - ● Clinical finding (finding)
 - ● Environment or geographical location
 - ● Event (event)
 - ● Observable entity (observable entity)
 - ● Organism (organism)
 - ● Pharmaceutical / biologic product (product)
 - ● Physical force (physical force)
 - ● Physical object (physical object)
 - ● Procedure (procedure)
 - ● Qualifier value (qualifier value)
 - ● Record artifact (record artifact)
 - ● Situation with explicit context (situation)
 - ● SNOMED CT Model Component (metadata)
 - ● Social context (social concept)
 - ● Special concept (special concept)
 - ● Specimen (specimen)
 - ● Stages and scales (staging scale)
 - ● Substance (substance)

Relationship

SNOMED CT Concept Model

- Rules for how SNOMED CT concepts are defined
 - Constrains the domain and range of each attribute
 - Defines some additional constraints (e.g. cardinality)
- Machine Readable Concept Model
 - Defines concept model rules in a computer processable way
 - Distributed with the international release of SNOMED CT

SNOMED CT Languages

1. Compositional Grammar (<http://snomed.org/scg>)

To define a SNOMED CT expression

```
182201002 |Hip joint|: 272741003 |Laterality| = 24028007 |Right|
```

2. Expression Constraint Language (<http://snomed.org/ecl>)

To constrain the set of possible concepts or expressions

```
< 19829001 |Disorder of lung|:  
116676008 |Associated morphology| = << 79654002 |Edema|
```

3. Expression Template Language (<http://snomed.org/etl>)

To define incomplete expressions with slots that are filled later

```
< 404684003 |Clinical finding|:  
363698007 |Finding site| = [[ +id ]]
```

4. Expression Query Language

To query over SNOMED CT RF2 content

Customizing SNOMED CT

Extensions

- Additional content for local use
 - To meet the needs of countries, specialties and realms
 - To meet vendor needs
 - To meet local business needs
- May include local
 - Concepts, relationships, descriptions
 - Subsets, Language, Maps
- Must have one or more authorized namespaces
 - Ensures global uniqueness of identifiers

SNOMED CT and Other Coding Systems

SNOMED CT acts as bridge between other code systems

Enables cross-domain queries and analysis

Map Example

Between SNOMED CT and an external code system

ICD-O simple map reference set

SNOMED CT concept		ICD-O code	
243930007	entire spine	C41.2	Vertebral column
372177002	entire nail plate	C44.9	Skin, NOS
61685007	lower limb structure	C76.5	lower limb, NOS
447643008	lipoma	8155/1	lipoma, NOS
127573000	neuroendocrine carcinoma, grade 2	8249/3	Neuroendocrine tumor, grade 2
447644002	benign stromal tumour	8935/0	stromal tumor, benign

SNOMED International Collaboration

- **WHO**
 - Maps to ICD-0, ICD-9 and ICD-10
 - US National Library of Medicine provides map to ICD-10-CM
 - SNOMED International and WHO cooperating on ICD-11
- **LOINC**
 - Links between SNOMED CT and LOINC minimize duplication and benefit users of both code systems
- **HL7**
 - Collaboration agreement to encourage use of SNOMED CT in HL7 messages, documents and resources
- **GMDN (Global Medical Device Nomenclature)**
 - Medical device terminology linked to SNOMED CT
- **ICN (International Council of Nursing)**
 - Joint work linking SNOMED CT and ICNP

SNOMED CT Supports Meaningful Health Records

Does patient have respiratory disorder?

Yes: subtype of respiratory disorder

Does patient have an infection?

Yes: subtype of infectious disease

Does the disorder affect the lung?

Yes: finding site is lung structure

Is the disorder caused by a virus?

Yes: causative agent is virus
