

The National Guidelines of the 22 highlighted breast cancer recommendations delivered in a structured way to help developing decisions support

# Responsibilities for the National Board of Health and Welfare

National Information Structure

Process model
Conceptual model
Information model

- National Health Classifications
- Swedish extension of SNOMED CT
- Coordination Centre for semantic interoperability within Sweden
- National Guidelines

#### But

We are not responsible for the implementations

# Objectives of the project

# The aim is to make the recommendations

- Functional in a digital system
- To be used by decisionmakers when developing Clinical Decision Support Systems
- Usable for quality assessment on local and national level

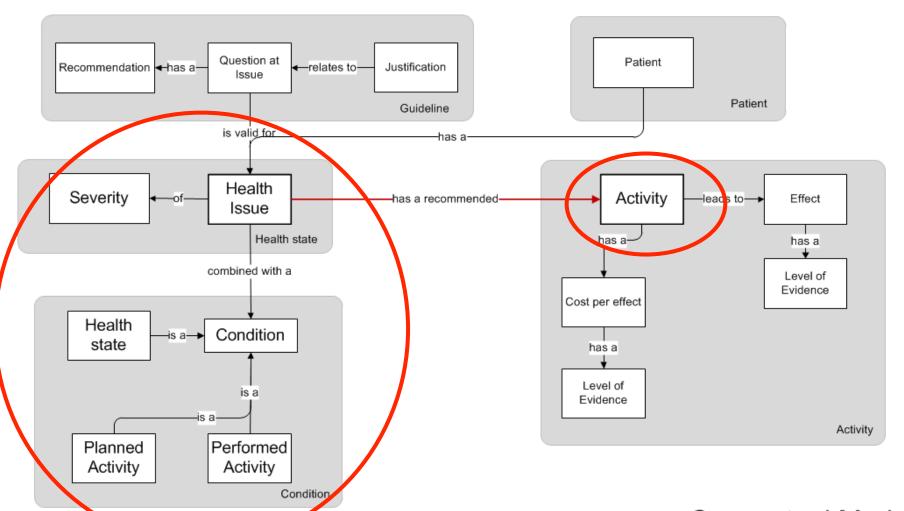

# Results

- Conceptual model
- Information model
- Mappings to
  - SNOMED CT
  - ICD-10
  - The Swedish Procedure Classification

Conceptual Model Breast Cancer Guidelines

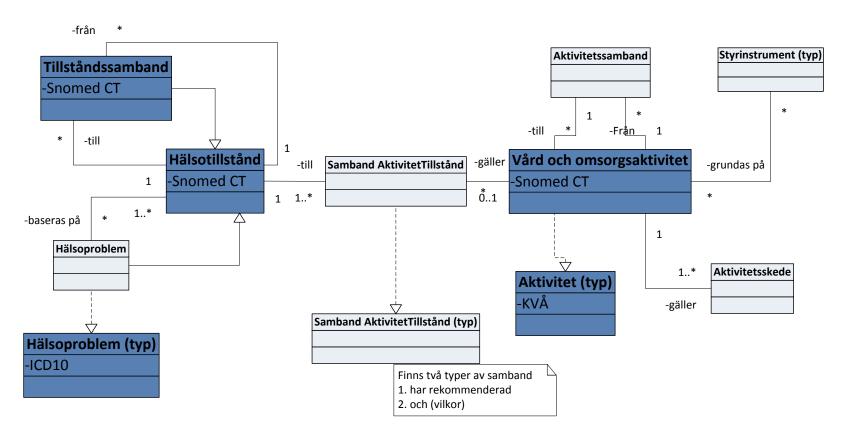

#### **BEFORE**

ID	Health Issue	Activity
	Breast cancer, preformed surgery, hormone receptor positive malignant neoplasm, specimen involvement by matted nodes, postmenopausal	Aromatase inhibitor for 5 years

#### **AFTER**

ID	Health Issue	Activity	Condition Performed Activity		
B058b	Breast cancer, hormone receptor positive malignant neoplasm, specimen involvement by matted nodes		Breast cancer surgery	Postmenopausal	Aromatase inhibitor for 5 years

#### Information Model Breast Cancer Guidelines

## **Lessons learnt**

- Involving health care professionals
  - Since this is not an IT-project
  - Changed mind sets on several levels
- Structure the information before mapping
  - Clarify what the information represents
- Resulted in higher quality of the national guidelines

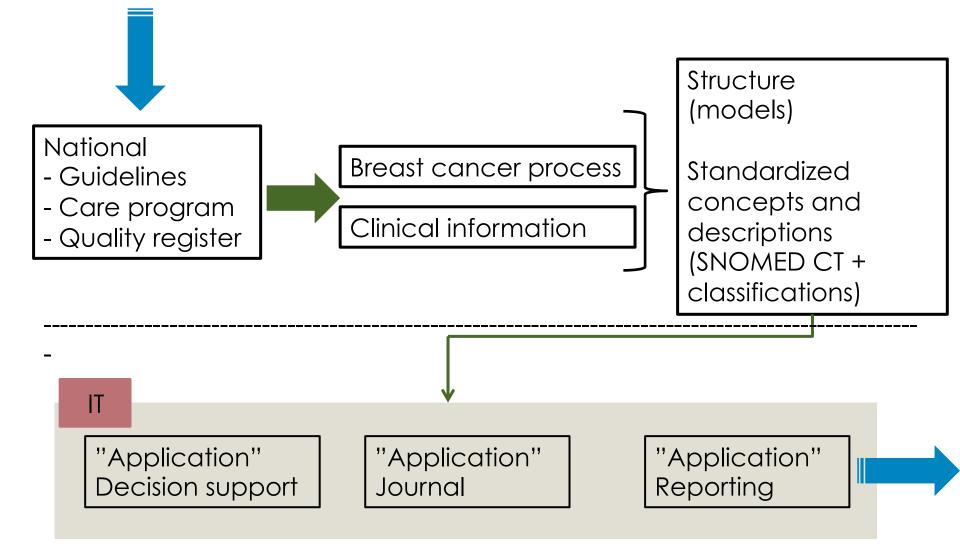

But there is a lot of work...

# Next step

# to further test and develop the method

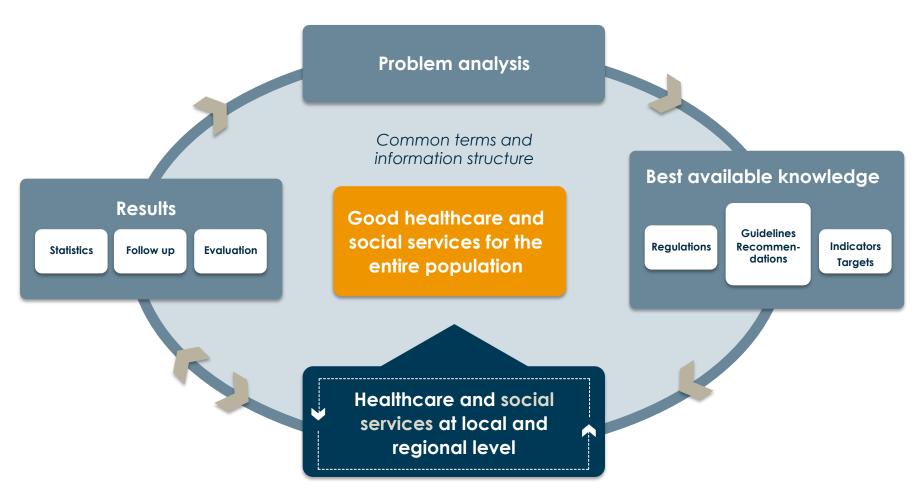

- Cooperation with two Regional Cancer Centres (RCC) in Sweden (covering 41 % of the Swedish population)
- Using the process models for the patients journey when diagnosed with breast cancer developed by RCC:s
- Using clinical information materials covering the patient journey through the breast cancer process
  - National Guidelines
  - National Breast Cancer Care Program
  - National Quality Register

# Our model to develop good healthcare and social services

11

### Decisions to make

- Terminology binding between the information model and SNOMED CT
- IHTSDO:s mappings between SNOMED CT and ICD-10
- Pre or post coordinated SNOMED CT concepts
- Who should be responsible for the maintenance

### Main results will be

- A method that could be applied on other clinical areas
- Information model
- Refsets for breast cancer

Thank you for your attention!
