

# New report identifies the benefits of using SNOMED CT for its broad range of stakeholders

SNOMED International is pleased to announce the launch of a [new report](#) that details the value each of its many stakeholder groups can experience by implementing SNOMED CT, the most comprehensive global language for health terms. This report builds on the work captured in a [series of videos](#) completed in 2020 in which a New Zealand health board highlights the advances it has made in realizing its vision of a connected, integrated system by using SNOMED CT.

The report, titled *SNOMED CT: Articulating Stakeholder Value*, was developed over the past year as part of our efforts to meet our [2020-2025 Strategy](#) commitments and to realize our vision of better health and improved patient outcomes worldwide.

It identifies where and how SNOMED CT is used, providing an end-to-end perspective of the entire universe of SNOMED CT users, including Members, policy makers, care providers, patients and citizens, researchers and knowledge producers, implementers, vendors and collaboration partners, and expands and extends our existing value propositions to each of those groups. It also lays out the pathway to realizing the full value of SNOMED CT when embedded in a clinical information system, a health data and analytics platform or an interoperability solution.
